Dr. J. Lederberg
Department of Genetics
Stanford University Medical Center
Palo Alto, California

Dear Josh:

The cytosine and citrulline plus pyrimidine mutants that you asked about do sound extremely familiar and I believe that they are mutants that Ray Roepke at one time studied. This would have been about the same time he investigated the thymine mutant (15 T). I have sent your letter to him at Lederle and asked him to forward any information that he may have on the organisms.

Sorry you can't manage our Symposium in September. It would have been good to see you again.

With best regards,

Sincerely yours,

J. O. Lampen
Director
